

[DEMO] Baalbek Dairy Cooperative Upgrade

Issue date: 2026-09-30

Description: A small dairy cooperative in the Baalbek-Hermel region processes milk from roughly 40 local herding families. Ageing equipment limits output and food-safety compliance, capping household income at a fraction of the region's potential. This project funds cold-storage and pasteurization upgrades so the cooperative can meet retail safety standards and reach new markets in Beirut.

Problem statement: Outdated processing equipment limits the cooperative's output and blocks access to retail-grade safety certification.

Proposed solution: Install modern cold-storage and pasteurization equipment, and train cooperative staff on food-safety compliance.

Objectives: Increase processed volume by 60% and achieve retail food-safety certification within 12 months.

Expected outcomes: Higher, more stable household income for member families and new retail distribution contracts in Beirut.
